501.1 Scope – Incorporation of WCAG 2.0 AA	See WCAG 2.x section	See information in WCAG 2.x section
502 Interoperability with Assistive Technology	Heading cell – no response required	Heading cell – no response required
502.2.1 User Control of Accessibility Features	Supports	This product does not interfere with accessibility features that are available through the user's operating system or browser. For example, users can use high contrast mode, text resize, and speech output.
502.2.2 No Disruption of Accessibility Features	Supports	This product does not disrupt accessibility features that are defined in the platform documentation as accessibility features.
502.3 Accessibility Services	Heading cell – no response required	Heading cell – no response required
502.3.1 Object Information	Supports	Attributes for role, state/s, boundary, name and other properties for all standard and custom user interface controls are programmatically determinable. We use semantic HTML. We have ARIA-ROLES in place.

Criteria	Conformance Level	Remarks and Explanations
502.3.2 Modification of Object Information	Supports	<p>States and properties that can be set by the user are capable of being set programmatically, including through assistive technology. For example, users are able to change focus and expand and collapse panels using a keyboard only.</p> <p>The state of the object is announced through assistive technology.</p>
502.3.3 Row, Column, and Headers	Supports with Exceptions	<p>Data tables are not used as part of the application. As new content is added, data tables may be included with the content. While we encourage our publishing partners to supply properly marked up content, as a practice, we do not generally alter provided content at this level.</p>
502.3.4 Values	Supports	<p>The current values available for a user input control can be programmatically determined. For example, a screen reader will read out the values in a drop-down menu, checkbox options, and radio buttons.</p> <p>Validated using JAWS with IE and VoiceOver with Safari.</p>

Criteria	Conformance Level	Remarks and Explanations
502.3.5 Modification of Values	Supports	<p>Values that can be set by the user can be set programmatically, including through assistive technology.</p> <p>Whatever input is needed can be entered using the keyboard.</p> <p>We support input from all input devices if they are supported by the browser.</p>

Label / ids and other accessible code necessary for screen readers are associated with all form elements.</p> <p>This was confirmed through accessibility testing with JAWS in Windows and VoiceOver in Mac.</p>
502.3.7 Hierarchical Relationships	Supports	<p>Hierarchical (parent-child) relationships are programmatically determinable. For example, when tabbing to a dropdown, assistive technology will announce how many items it contains.</p> <p>Standard was evaluated using manual keyboard checks and code inspection using Chrome and IE Developer Tools.</p>

Criteria	Conformance Level	Remarks and Explanations
502.3.8 Text	Supports	Standard HTML code is used for displaying text on the screen used. Text styling is controlled through cascading style sheets.
