

Vendor Product Accessibility Statement and Documentation

Commitment Statement

NoodleTools strives to ensure equal access for all users wherever possible. Our development process includes periodic interface reviews and automated testing, designed to identify areas and components where we can improve accessibility. Those items are added to our list of development tasks to get done as time permits.

Required Documentation

- WCAG 2.0 Checklist
- Voluntary Product Accessibility Template (VPAT)
- Conformance and Remediation Form

Accessibility testing is performed periodically by our QA team. We do not do additional testing with persons with disabilities. We do not work with 3rd-party agencies to evaluate accessibility support.

Product Usage Information for Users with Disabilities

There are no built-in product features designed specifically to improve accessibility for users with disabilities. However, since NoodleTools runs in a browser, users can take advantage of browser accessibility settings (i.e., font size, color/contrast settings, etc.) in conjunction with the application.

Various product accessibility gaps along with suggested interim workarounds are described in our VPAT.

Feedback Mechanism

Users who would like to ask questions or report issues regarding accessibility may contact our team via the online helpdesk at <http://noodle.to/helpdesk>
