

## Credo Statement of WCAG Conformance

On February 29, 2016, the following pages at <http://search.credoreference.com> conform to the Web Content Accessibility Guidelines (WCAG) version 2.0 at Level AA.

- (<http://search.credoreference.com>)

The specification that this content “relies upon” is HTML5. The technologies that this content “uses but does not rely upon” are: JavaScript, Ajax, CSS, PDF, PNG, JPEG, MP4/M4v. Content was tested using a variety of user agents and assistive technologies.

There is one exception to the conformance described above:

Credo's videos do not contain closed captions or audio descriptions, and thus fail Level A success criterion 1.2.2 and Level AA success criteria 1.2.3 and 1.2.5. As Credo is a content aggregator, video content in Credo comes from third party publishers. Synchronized captions are not included with publisher content. Many video items in Credo content contain a non-synchronized textual transcript (entry body) that may be read by a screen reader. Credo is exploring ways to provide synchronized captions in the future.
